

Danny Henderson, CO

I applied to the Women Hunt™ Program on the day prior to my 60<sup>th</sup> birthday – but age is only a number! I'm the mom of three: Chuck, a college senior majoring in Aviation Science; Christina, a Cosmetic Chemist for an International Makeup Company; and Stephanie, my oldest with cerebral palsy, but the joy and life of every party.

I have been married for 35 years to a retired Air Force fighter pilot who is now a Commercial Airline pilot. I am the President/Owner of our family business that manages our personal rental properties for 30+ years. I am the past President and now member of the board of Trailhead Communities, a non-profit that is constructing an apartment building that will bring together active seniors, professionals, and adults with developmental disabilities to create an intentional "extended family."

I am BRCAII+ - so I chose to have prophylactic mastectomies 20 years ago. My father, aunt and grandmother all had breast cancer, so it was a blessing of a diagnosis in that I was able to be proactive and take positive steps to do everything medically possible to avoid a breast cancer diagnosis so far.

When our children were young, we raised three different Guide Dog Puppies for the Blind. It is a wonderful organization of service and taught an especially great life lesson to our kids, that dogs can have a higher purpose than just being a pet. It was truly an act of compassion and selflessness for our kids to love and train these dogs and then send them off to be of service and offer lifechanging assistance to others in need.

For fun, and whenever I can find the time, I love to play tennis as much as possible with a large group of ladies that have become close friends. My newfound passion is learning to hunt and to nurture the friendships I made with the other 11 fantastic women (actually 13 including Renée & Linda!) I met through the Women Hunt™ Program. I also hope to continue to meet others along my hunting journey to build lifetime experiences, not only during hunts, but in speaking to others and educating on what hunting contributes to the conservation of animals and to all our natural resources.
